1 Description

Series DDRA-5... screw-in cartridges are direct acting, seated pilot pressure-reducing valves. They are available in sizes 5 and have a 3/4-16 UNF mounting thread. The straightforward design delivers an outstanding price/performance ratio and good pressure/flow ratings. 4 pressure ranges are available in order to obtain precise pressure settings over the whole of the required pressure range. These

pressure-reducing cartridges are predominantly used in mobile and industrial applications for reducing a system pressure. All external parts of the cartridge are zinc-nickel plated according to DIN EN ISO 19 598 and are thus suitable for use in the harshest operating environments. For self-assembly, please refer to the section related data sheets.

IMPORTANT!

Pos. E:

Venting the spring chamber to the atmosphere.

Due to the atmospheric venting, an external leakage cannot be ruled out. Depending on the application, external influences and duration of use, this oil volume might vary. To collect the oil in the spring chamber, a vertical installation orientation is recommended.

6 Installation information

IMPORTANT!

When fitting the cartridges, use the specified tightening torque. Set the required pressure with the adjusting screw (s₁). After you have set the valve, lock the adjusting screw with the lock nut.

IMPORTANT!

Valve settings can be sealed by fitting the tamper-proof cap. To fit the cap, the snap ring ²⁾ has to be removed. Subsequent adjustment is only possible by destroying the tamper-proof cap.

ATTENTION!

Only qualified personnel with mechanical skills may carry out any maintenance work. Generally, the only work that should ever be undertaken is to check, and possibly replace, the seals. When changing seals, oil or grease the new seals thoroughly before fitting them.
