

# Directional valve 3-way/2-position

 $Q_{max}$  = 40 l/min,  $p_{max}$  = 315 bar pneumatical operation, direct acting, poppet type Type series: W1R B...

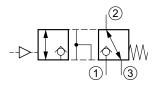

- Slip-in cartridge valve
- For cavity AC
- All external parts with zinc-nickel plating according to DIN EN ISO 19598
- Guided valve spool and poppet
- Control head is hard-anodized aluminium

## Description

The 3-way/2-position directional seat valves, series W1R..., are size 6, pneumatically operated, direct acting, pressure balanced, push-in valves. In the normal condition (non-operated), flow in port 1 is shut off without leakage. They are designed on the tried and tested principle of the guided poppet, and the guide spool has a seal. This valve type has an underlapped spool. In the crossover position, all connections are thus connected, i.e., there is a connection between ports 1, 2, and 3 during the valve's switching period. The pneumatic control head has a G1/8" threaded

port for the air feed. All external parts of cartridge are zinc-nickel plated, the aluminum control head is hard-anodized, and the valve is thus suitable for use in the harshest operating environments. These valves are predominantly used in certain mobile and industrial applications where leak-tight shut-off functions are crucially important. Examples are where loads, tensions, or clamping forces must be held without leakage. For self-assembly, please refer to the section related data sheets.

#### Dimensions and sectional view

#### Installation information

#### ATTENTION!

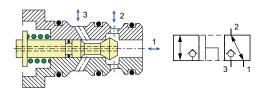

Only qualified personnel with mechanical skills may carry out any maintenance work. Generally, the only work that should ever be undertaken is to check, and possibly replace, the seals. When changing seals, oil or grease the new seals thoroughly before fitting them.

#### NOTE!

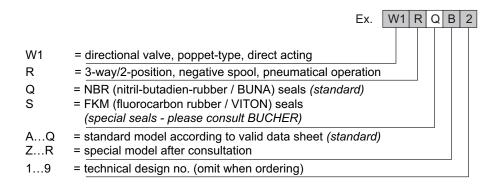

1) When fitting the slip-in valves, use the specified tightening torque for the mounting screws. The value can be found in the chapter "Technical data".
