## Description

The 2-way/2-position solenoid operated directional seat valves, series WRVP22G..., are size NG 12 / SAE 16, two stage, pressure balanced screw-in valves with a 1 5/16-12 UN mounting thread. They are designed on the poppet/seat principle, and the 2 to 1 flow path is therefore virtually leak-free. "De-energized closed" function is available. The straightforward design delivers a good price/performance ratio and outstanding headloss/flow ratings. These valves are used in mobile and industrial applications where leak-tight shutoff

functions are crucially important. Examples are where loads, tensions, or clamping forces must be held without leakage. All external parts of the screw-in valve are zinc-nickel plated and are thus suitable for use in the harshest operating environments. The slip-on coils can be replaced without opening the hydraulic envelope and can be positioned at any angle through 360°. For self-assembly, please refer to the section related data sheets.

Installation information

**NOTE!**

1) When fitting the screw-in cartridge valve, use the specified tightening torque. The value can be found in the chapter "Technical data".

**ATTENTION!**

Only qualified personnel with mechanical skills may carry out any maintenance work. Generally, the only work that should ever be undertaken is to check, and possibly replace, the seals. When changing seals, oil or grease the new seals thoroughly before fitting them.
